SUMMARY

Software engineer with 2+ years building production backend systems in Java, Python, and TypeScript, including customer facing features owned from requirements through deployment. Experience spans Spring Boot, REST APIs, microservices, distributed systems, PostgreSQL, AWS, security, and event driven services. MS in Computer Software Engineering, ASU.

PROFESSIONAL EXPERIENCE

DADO Luxury Ventures, Inc. | Backend AI Engineering Intern

July 2026 - Present

- Driving end to end delivery of a new customer facing feature using React, TypeScript, PostgreSQL, Supabase, and AWS EC2, S3, IAM while refactoring backend services behind an event driven notification system and standardizing Git flows, repository structure, and code review practices across the team.
- Identified and remediated backend security vulnerabilities across production services ahead of launch, hardening authentication, authorization, and two factor authentication flows alongside secure coding practices.
- Established end to end test coverage with Playwright and integrated Sentry for centralized exception tracking, performance monitoring, and release diagnostics, improving visibility into production failures.

Deloitte | Solution Delivery Analyst

June 2022 - July 2024

- Delivered backend automation and workflows in Python, Bash, and Linux for enterprise clients inside agile delivery teams, troubleshooting networking and security issues across production environments while cutting manual effort by 25%+ and improving system reliability.
- Partnered directly with SOC and client engineering stakeholders to gather requirements, translate them into working solutions, and own production issues through resolution.
- Engineered and tuned 20+ Google Chronicle detection rules from telemetry and log data, improving alert quality and accuracy by 30%.
- Built reusable Python, SQL, and Bash tooling plus operational playbooks and docs that let teams run and extend workflows independently.

Deloitte | Technology Intern

Feb 2022 - May 2022

- Shipped Python and Bash automation for security operations with Git based versioning and clear handoff documentation.
- Built XSOAR automation workflows for incident triage, applying AWS and Azure fundamentals across team deliverables.

PROJECTS

Aligned Rewards: OKR Workflow Management Platform | *NestJS, MongoDB, Cypress, Postman*

- Engineered REST APIs in NestJS and TypeScript for draft autosave, key result updates, AI suggestions, and publishing workflows, improving reliability across OKR creation flows.
- Modeled MongoDB entities and workflow state models to support draft management, autosave recovery, and publish transitions.
- Built end to end Cypress tests covering core flows, permissions, and publish integrity, reducing duplicate and unauthorized actions.

AI-Powered Job Application Platform | *Next.js, TypeScript, Prisma, SQLite*

- Implemented an approval gated AI workflow with RAG over saved job links, notes, and recruiter context to generate grounded follow up content and application Q&A, supporting both OpenAI and local Ollama models.
- Developed responsive React interfaces and Next.js API routes for CRUD across applications, reminders, recruiter details, and other job linked records, backed by Prisma persistence.
- Built the full application pipeline with calendar based reminders, daily notes, search and filtering, stats views, and CSV export.

CareCaller: Patient Monitoring Workflow Platform | *Next.js, TypeScript, Supabase,*

- Designed and trained an AI model for a voice pipeline with safety escalation, cached memory, structured extraction, and LLM fallback.
- Built timeline, appointment, and medication workflows that update logs, memory, and automation jobs on every correction.
- Shipped a multilingual patient facing interface across the full stack, integrating Supabase, Vapi, ElevenLabs, and Groq.

TECHNICAL SKILLS

Languages: Java, Python, SQL, TypeScript, JavaScript, Bash, C++

Web & Frameworks: HTML5, CSS3, ReactJS, Next.js, NestJS, Spring Boot, FastAPI, REST APIs, Prisma

Backend & Systems: Microservices, Distributed Systems, System Design, API Gateway, RBAC, JWT, OAuth, Concurrency

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Vector Database, Schema Design

Cloud & DevOps: AWS EC2, S3, RDS, IAM, Lambda, CloudWatch, Docker, Kubernetes, CI/CD, Linux/Unix, Bash, infrastructure automation

Testing & Tools: Cypress, Playwright, Postman, Git, Unit Testing, Integration Testing

AI & Data Integration: RAG, LLM APIs, Vector Search, Embeddings, Llama, AWS Bedrock, LangGraph, API integrations

EDUCATION

Arizona State University

Aug 2024 - May 2026

Master of Science in Computer Software Engineering | GPA 3.93

Achievements: 2nd Place - ASU SoDA Spring 2026 Code Challenge XII | 3rd Place - IISE Optimization Hackathon 2025 (ELEKTRAZ).

Jaypee Institute of Information Technology, Noida, India

Aug 2018 - June 2022

Bachelor of Technology in Information Technology | GPA 3.8

Selected Coursework: Software Development, DSA, DBMS, Cloud Based Enterprise Systems, Operating Systems.
